THE UNIVERSITY OF CHICAGO  
DEPARTMENT OF BIOLOGY  
BIOLOGY 101  
Lecture 10: The Cell Cycle  
and Mitosis  
The cell cycle is the process by which a cell grows and divides into two daughter cells. It consists of several stages: G1, S, G2, and M. During G1, the cell grows and prepares for DNA replication. In S phase, DNA is synthesized. G2 is a period of further growth and preparation for division. M phase, or mitosis, is the process of cell division, where the cell's chromosomes are separated and the cell divides into two daughter cells.
